

TokenFence Studio Internal Notes

Page 1 of 3

Client: Acme Pay CN

Contact: chris@example.com / 13900001111

Database: postgres://root:secret@localhost:5432/tokenfence

TokenFence should not just upload files. It should parse documents, clean repeated headers, scan sensitive values, create RAG-ready chunks, and route each file to a suitable model.

Document Intelligence Pipeline should support PDF, DOCX, image OCR placeholders, logs, Markdown, and code files.

Secret-like files should prefer local models or redacted cloud requests.

The output should include clean Markdown, chunks.json, risk metadata, and suggested model routing.
